

## Environmental policy

Wintzell & Fried's ambition is to contribute in reducing the negative environmental impact of chemicals in our role as a chemical supplier. We work preventively and long-term with the environment as an integral part of our business. Wintzell & Fried will contribute and be part of a sustainable future.

We meet goals and make decisions through our guiding principles:

- Have a good and ongoing communication with our customers about environmental aspects of the sale.
- Perform our services in a safe manner and taking into account people, property and the environment. To be compliant with current legislation and other regulations relevant to us is a minimum to achieve this.
- Strive to always plan and streamline our transports to customers and warehouses to minimize the amount of emissions and prevent pollution.
- Strive to minimize waste from our own operations, promote the mindset of environmentally friendly recycling and be frugal with all material, raw material and energy.
- Keeping environmental work alive and up-to-date by following up and evaluating our environmental impact and goals, as well as increasing knowledge and awareness of environmental issues among all employees.
- Advise our customers on phasing out chemicals and more environmentally friendly alternatives.

This environmental policy is based on our core values and code of conduct and governs the goals that the business adopts and strives to achieve. Wintzell & Fried shall stand for responsible business where we continuously adapt and improve our goals for our environmental policy.
